

9.4 Meter ESA

Like all Kratos earth station antennas, the 9.4 Meter Earth Station Antenna provides high gain and exceptional pattern characteristics.

This antenna system is designed for worldwide use in C-, Ku-, K- and X- Band Low Pim high density data and communications networks.

The electrical performance and exceptional versatility provides the ability to configure the antenna with your choice of linearly- or circularly- polarized 2- or 4- port combining networks. That versatility is provided at the time of initial purchase, as well as in the future, as your satellite communication requirements evolve.

This antenna system is used worldwide in broadcast applications and high density data, voice and communications networks. The Kratos 9.4 meter earth station antenna features a dual reflector Gregorian optics system and close-tolerance manufacturing techniques.

This combination provides extremely accurate surface contour resulting in exceptionally high gain and closely controlled pattern characteristics. Kratos earth station antennas provide maximum durability with minimal maintenance.
